

Editing, Being Concise/Descriptive with Instructions, Adding directions

making it a shorter loop so that way it wouldn't take as long to make [P1]	I wish I had made it a little longer, and explain things in more detail [P3]	Being able to edit with some sort of software [P1]	would break away to another segment of Showing the iron actually making that sound to confirm that it's on. [P2]	Have a full example end to finish, actually cooking rice with measurments [P6]
I think it was a bit long. And if someone were trying to watch this as a tutorial. I think they would skip through most of it [P1]	spread it out a little more and pause in between steps [P3]	Show state of device when turned on to be more clear [P3]	I couldn't see like the numbers on the screen changing. [P4]	I think it would be nice to know I think it would be nice if like, the instructions were a little clearer [P9]
having some sort of a reference sheet at the end like something physical that they could hold on to. I think would have been beneficial[P4]	Edit and includ images in the screen[P7]	Say the model of the printer so people know what print this works for [P7]	having like actual examples of the different loads [P5] followed by explaining like where the software would go and then the soap ect. [P5]	Explaining parts of the machinee eand additional settings [P8]
change the order and be strategic with steps [P5]	Having more specific directions [P8]	bit more clear about it. Each step that you have to do, especially like feeding the paper in and everything [P9]	Having more specific directions [P8]	Figuring out the order and not jumping around [P4]
Not Knowing if they were as descpitive as possible [P5]	No Video Editing Skills [P2]	not knowing exactly like what to emphasize [P5]	Trying to keep it short. but trying to fit everything in, and not like take forever, and being concise [P1]	describing what's supposed to be on the screen [P7]
I didn't realize it and show this stuff that's just bad angles. But yeah, there was a button and it said like. Oh, would you like to create a new file and they did. And then it was like, oh, do you want to name it. [P2]	Showed what the state of the camera would look like if you did not choose a certain setting	didn't include the images but ideally I would have been able to add the images on the screen as I was speaking [P7]	took photos of screen, but no editing skills	Be more descpitive [P5]
Being descriptive about features and naming things correctly [P5]	I guess I didn't mention that was optional, but I also didn't show how to rename that on the small printer screen and I probably should have done that. If I mentioned that was an optional step. [P7]	I ended up repeating the instructions as I do it, but I figured it's hard to hear me if I even turned away from the camera.[P7]	I probably could have done like a better job at even like explaining the whole explanation explanation behind how to use a washing machine [P5]	I never mentioned turning the volume knob something I would, I should have mentioned before [P1]
the challenging part is just explaining overall is just, it causes me trouble. [P5]				

Clear labels & Visuals on device, Being able to Refer to Notees, having an easy editing process

Used device often so was able to go with the flow [p5]	first part was more rehearsed [P7]	Practiced the task before filming [P7]
was able to refer to notes	explaining every stuff wasn't so bad, just go. I'm used to using a printer and then creating an example to show [p7]	I had to brush up on like the terminology, because. I'm still like fairly new to photography myself. [P4]
I knew that I wanted to record several different things [P3]	Relies on visuals as well as just playing around with th device[P1]	You can film something and then just take your finger off the record button and then whenever you press back on, it'll resume where you left off. So it kind of edits it for you and makes it really easy to shoot something [P3]
Tik tok is really easy. It lets you flip the camera and pause whenever you want to [P3]	I think TiKTok made the editing process really smooth and quick. So that was good. [P3]	I knew that I wanted to record several different things [P3]
And and tik tok allows me to do that without using an editing apps such as I movie. So I was able to do it all in one app, if that makes sense[P3]	Device had good visuals [p1]	machine was simple [P6]
Labels and common symbols (power, pause, start ect) [P8]	Appliance itself wasn't too difficult to show [p3]	Machine is straightforward to use [P8]
Machine is straightforward to use [P8]	Like I knew like wherever we had to fit in like, especially like I think the buttons on the machine, it was like pretty steady [P9]	Pretty easy on just filming themselves [P6]
Yeah, the buttons were pretty like it was really helpful. I was linked to my iPad because they were like okay click on this flashing button and it was kind of like intuitive [P9]		

Clear labels & Visuals on device, Being able to Refer to Notes, having an easy editing process

Have a full example end to finish [P5]	Would of showed an example shoot [P4]	Couldn't do the whole process [P6]
Timing of things [P6]	Hard to keep it under 1 min (using tik tok) [P3]	I was trying to like do it by myself without knowing recording. It was a struggle.[P2]
I was a little pressed for time, which we can see later, but that is the one downside, I would say [3]	Planning out what I want to do [P1]	I think it would have been helpful if I had an example for like a light load a regular load and a heavy load.To just be more descriptive and exact[P5]
Like I feel like if I had the scripted a little bit better. It I would have describe things a little bit more in detail [P6]	Prepare the steps/taks ahead of time [P7]	

Error handling, confusin in UI, Device Errors

Have a better understanding of what the steps are actually were because I hadn't really had any practice doing that thing before. [P2]	maybe get like a friends like different perspectives on the tutorial [P4]	So I think it would have just been like a little helpful to get a more high quality camera prevented my hand from [P4]	I feel like it was a little difficult to to just like keep it steady and kind of like had to go back and forth, making sure was like still pointing out what I wanted to point out [P4]	Hard to show certain angles and scope of the device and USB with phone camera [P2]	Recording with one hand [P2]	split into two videos while waiting for one part to load [p2]
the angle of filming it because ideally I would have. A moving camera that would have a close up of the printer itself. [P7]	So having to do one with the my phone in my hand and the other with using the device could get a bit challenging [P1]	Not doing the task in a tutorial before [P2]	consulted an 'expert' to put tutorial into a concise manner. [P4]	but because I was working by myself. It just had to be that far away angle. So a lot of the steps were verbal instead of a Show Not Tell kind of situations. [P7]	I had to retake that part, the ending three times [3]	I didn't realize it and show this stuff that's just bad angles. But yeah, there was a button and it said like. Oh, would you like to create a new file and they did. And then it was like, oh, do you want to name it. [P2]
confusion in UI [P9]	iPad like connection it took like really long to load when I was setting it up so I had to like keep cutting the video because I didn't want it to be like all like loading screens [P9]	initial error in machine set up, spent time fixing it [P9]	Like I feel like if I had the scripted a little bit better. It I would have describe things a little bit more in detail [P6]	So I actually recorded this twice before like I put this together because I failed to like actually printed out.[P9]	iPad but this is iPad so it's like connected Bluetooth to my I'm connecting first half of the video I'm connecting the Bluetooth to my iPad.[P8]	So I was waiting A long time for the files to transfer and it wasn't transferring Because it turns out I just had to quit that transfer completed the thing and it was already there [P2]
Process/ UI was difficult	like the instructions on the iPad, they were static and like if there was like maybe like a GIF or like a like quick video [P9]	It was really hard to see where I filled up the detergent to I mean [P8]	I would definitely get like a tripod or something to like not make it so shaky [P4]	Film in a place with better connection (had to use bluetooth) [P9]	Be able too see the device more close up [P4]	One thing was recording in itself, you know, because you can use a device with one hand, but it's really supposed to be a two handed device. [P1]
had to film two times because of stuttering [P6]						

Findings

- Recording with one hand was difficult
- Bing Clear and Concise with Instructions
- Ability to edit videos
- Providing more information on the device/ terminology
- Being able to show test & error cases
